Field of the Invention The invention relates to a liquid crystal display device, and more particularly to a liquid crystal display device of a matrix driving method. 2. Description of the Related Art In a liquid crystal display device of the related art, a display electrode on a substrate and a counter electrode are disposed facing each other through a liquid crystal layer and a pair of polarizers disposed on either side of the liquid crystal layer. Each pixel is selected by controlling the voltage applied to the electrodes and the liquid crystal layer is driven by the intensity of electric fields in the liquid crystal layer in the selected pixel. The liquid crystal display device of the related art has a matrix electrode structure. According to the matrix
